

AdvanTex[®] AX100 Treatment Systems

For Onsite Treatment of Commercial and Multi-Family Wastewater

Ideal for:

- Multi-family residential properties
- Cluster systems, community systems
- Subdivisions, resorts, golf course developments
- Mobile and manufactured home communities
- Parks, RV parks, rest areas
- Truck stops, restaurants, casinos
- Schools, office buildings

We've Written the Blueprint for the Decentralized Wastewater Treatment Industry

The Product

Orenco's AdvanTex® Treatment Systems utilizing the commercial-sized AX100 can make raw wastewater up to 98% cleaner, meeting stringent regulatory requirements. It can also reduce nitrogen significantly, depending on influent and configuration. And the AX100 offers all the benefits of Orenco's residential-sized AdvanTex Treatment Systems:

- Consistent, reliable treatment, even under peak flows
- Compact package, small footprint, for small sites
- Premanufactured package, including textile medium, for quality control
- Low maintenance requirements; low life-cycle costs
- Production of clear, odorless effluent that's ideal for reuse

The Program

It takes more than a product, however, to solve onsite wastewater problems. It takes a comprehensive program ... one that ensures a successful project every time and provides support for the life of the system. That's what Orenco Systems® has done. We've engineered a program, not just a product.

Orenco's commercial AdvanTex program includes ...

- Trained and authorized Dealers, Installers, and Service Providers
- Training and plans review for Designers
- A comprehensive project checklist for successful system design, installation, start-up, and follow-up
- Round-the-clock system supervision via Orenco's remote telemetry controls
- A commitment to ongoing O&M, signed by system owners
- Web-based tracking of site and performance data on Dealer extranet
- Ongoing manufacturer support through Orenco's Engineering Department

AX100 filter pods can be installed above ground or partially bermed, depending upon site conditions.

Decades of Research, Thousands of Installations

Orenco's patented* AdvanTex Treatment System is a recirculating filter that's configured like a recirculating sand filter — a packed bed filter technology that Orenco engineers have helped to perfect since the 1970s. Like recirculating sand filters, AdvanTex is reliable and low-maintenance. It is superior to other packed bed filters, however, in its serviceability and longevity.

It is also superior in its treatment media. AdvanTex uses a highly efficient, lightweight textile that has a large surface area, lots of void space, and a high degree of water-holding capacity. Consequently, AdvanTex Treatment Systems can provide treatment equivalent to that of sand filters at loading rates as high as 25-50 gpd/ft² (1000-2000 L/d/m²). That means AdvanTex can treat high volume commercial and multi-family flows in a very compact space.

Our textile-based, multi-pass treatment technology has undergone third-party testing and evaluation to ANSI Standards. About 10,000 residential-sized AdvanTex filters have been installed since 2000. And about 1,000 of our new, commercial-sized AX100 units are now in operation, including the installations described on the back page.

Textile Media

The treatment medium is a uniform, engineered textile, which is easily serviceable and allows loading rates as high as 50 gpd/ft² (2000 L/d/m²).

Spray Nozzles

Efficient distribution is accomplished via specially-designed spray nozzles.

Laterals and Lids

Isolation valves, flushing valves, and hinged lids with gas springs allow easy access and servicing by a single operator.

Telemetry Controls

Orenco's telemetry-enabled control panels use a dedicated phone line and ensure round-the-clock system supervision and real-time, remote control.

AdvanTex® AX100 Treatment Systems

Carefully Engineered by Orenco

Orenco Systems has been researching, designing, manufacturing, and selling leading-edge products for small-scale wastewater treatment systems since 1981. The company has grown to become an industry leader, with about 275 employees and with more than 100 distributors and dealers representing most of the United States, Canada, Australia, New Zealand, and parts of Europe. Our systems have been installed all over the world.

Orenco maintains an environmental lab and employs more than a dozen civil, electrical, mechanical, and manufacturing engineers, as well as wastewater treatment operators. Orenco's systems are based on sound scientific principles of chemistry, biology, mechanical structure, and hydraulics. As a result, our research appears in numerous publications and our engineers are regularly asked to give workshops and offer trainings.

Oregon Riverside Community

Twelve AX100s are providing advanced secondary wastewater treatment in Hebo, Oregon, for a small community collection system that discharges directly into Three Rivers, after UV disinfection. The average annual design flow is 17,000 gpd (64,400 L/d) with a peak daily design flow of 80,000 gpd (303,000 L/d) to account for I&I contributions from the collection system. Effluent BOD₅ and TSS are averaging 4.4 and 4.5 mg/L, respectively.

Malibu, California Restaurant

Ten AX100s at the top of a Malibu bluff are treating high-strength waste from a large (200+ seat) beachfront restaurant, 100 feet (30 m) below. This high-visibility tourist destination requires reliable, odor-free operation. Effluent sampling indicates excellent treatment, including nitrogen reduction. At an adjacent housing development, another system, consisting of 20 AX100s capable of treating up to 60,000 gpd (227,000 L/d) peak flows, is under construction.

Mobile, Alabama Utility-Managed Subdivisions

South Alabama Utilities (SAU) in Mobile County, Alabama, has become the subject of nationwide classes, presentations, and tours because of its ambitious and innovative solution for serving 2,500 new customers in nearly 30 new subdivisions and commercial properties northwest of Mobile. How? By installing 18 miles (29 km) of interconnected Orenco Effluent Sewers that, by full build-out, will be followed by 100 AdvanTex AX100s to treat half a million gpd (1.9 million L/d) of effluent, at better than 10 mg/L.

Champion Hills is one of the many subdivisions in rural Mobile County served by Orenco's effluent sewers and treatment systems.

Under SAU's program, developers, builders, homeowners, and the utility all share the cost of extending wastewater infrastructure. With nearly 200 dwelling units currently on line and treatment for 230,000 gpd (871,000 L/d), total costs are averaging about \$8,000 per home (for infrastructure, tanks, STEP systems, and treatment) . . . roughly half the cost of conventional sewers.

To order a complete design/engineering package for Orenco's Commercial AdvanTex Treatment Systems, contact your local Commercial AdvanTex Dealer. To find a Commercial Dealer, go to www.orenco.com and click on "Advanced Treatment Systems," "AdvanTex® Treatment Systems," and "Authorized AdvanTex Dealers." Or call 800-348-9843 and ask for Systems Engineering.
